

PREMIUM COILS

...And We Have The **Brass** To Prove It

OEM delivers the premium quality parts your customers demand for import and domestic applications.

- Solid-Brass terminals help to prevent ignition failure due to galvanic corrosion common to aluminum and plated connections of dissimilar materials.
- Specific OEM epoxy formulations dissipate heat faster, resist vibration, and withstand harsh under-hood environment.
- Designs are thermal-shock-tested from -40C to 125C to ensure reliability under brutal climatic conditions.
- Designs are endurance-tested at 125C extreme high temperature – for up to 1,000 hours – to provide lifetime reliability by design, material, and construction.
- Primary and secondary wires protected with highest temperature rated enamel coating available on the market.
- Sophisticated electronic circuitry within PCM/ECM-controlled coils ensures compliance with OE engine management control software architecture, while providing maximum energy output.
