

Introducing the new Fuel Tech Solution from Carter®

The CV1000 Circuit Verifier Diagnostic Tool

The Carter® CV1000 Circuit Verifier is an essential tool for any technician working on fuel system related repairs. It allows you to conduct a comprehensive fuel pump circuit test in a matter of seconds – determining if a vehicle's electrical system is malfunctioning and contributing to a no-fuel situation. Affordable, easy to use, the CV1000 is designed to make your job easier by increasing diagnostic accuracy.

EASY TO USE!

Connects quickly to the vehicle's fuel pump wire harness connector.

A red LED flash confirms an electrical problem with the wire harness or associated electrical system.

A green LED flash indicates that the wire harness and associated electrical system are functioning properly.

CV1000 Kit includes:

- (1) Carter® Circuit Verifier Diagnostic Tool (CV1000)
- (3) Application-specific adaptor harnesses (Ford, Chrysler, GM)
- (1) Complete step-by-step instructions, including a "how-to" guide
- (1) 15-foot attachment cable

Special Introductory Offer!

\$224.95
Regular \$259.95

Complete Fuel System Solutions for the Professional

EVERY BATTERY FOR EVERY NEED®
